SUMMARY

AI/ML and software engineer pursuing an M.S. in Computer Science (AI Specialization) at USC, with hands-on experience building production RAG chatbots, agentic multi-agent AI systems, and full-stack backend services. Proficient in Python, LLM orchestration, vector databases, AWS, FastAPI, React, and MongoDB.

EDUCATION

University of Southern California

M.S. in Computer Science – Artificial Intelligence

Los Angeles, CA

Expected Spring 2028

University of California, San Diego

B.S. in Cognitive Science with specialization in Machine Learning & Neural Computation

La Jolla, CA

Major GPA: 3.9

Minors - Data Science and Finance

Spring 2025

- **Honors:** Provost Honors, Good Standing
- **Relevant Coursework:** Data Analytics, Supervised Machine Learning, Unsupervised Machine Learning, Reinforcement Learning, Deep Learning, Neural Networks, SQL, AWS, Data Management, Systems for Scalable Analytics, Business Analytics

WORK & LEADERSHIP EXPERIENCE

AI/Software Engineer | Auro Wellness (Independent Contractor)

Jan 2026 – Present | Remote

- Engineered and deployed a production RAG chatbot using Python, LangGraph, MongoDB, AWS, and React, launched Nov 2025; assumed expanded AI/Software Engineering ownership in Jan 2026.
- Designed the end-to-end retrieval and orchestration architecture, integrating vector search, persistent application data, LLM workflows, and a React frontend into a custom business-facing system.
- Reduced repetitive customer questions requiring human response by 90% by routing routine inquiries through the chatbot, substantially reducing manual response workload.
- Developed a Next.js website for the company's podcast, owning frontend implementation and deployment-ready web development
- Analyzed additional business processes and designed an automation plan to reduce manual operation work and improve workflow efficiency

Lead Technical Intern | UCSD ITS

April 2025 – September 2025 | La Jolla, CA

- Spearheaded the architecture and development of an agentic AI platform, orchestrating compound multi-agent systems for autonomous task execution and knowledge retrieval.
- Led a team of interns, driving end-to-end design, prototyping, and scalable implementation aligned with cutting-edge LLM frameworks.
- Authored comprehensive documentation and tutorials, improving system onboarding and future-proofing the AI infrastructure for rapid scaling.
- Cultivated startup-style agile development practices, enhancing platform delivery speed and collaboration efficiency.

R&D AI/ML Engineer Intern | Uzeru

January 2025 – January 2026 | Remote

- Engineered a Retrieval-Augmented Generation (RAG) pipeline with multi-agent orchestration, integrating LLMs, vector databases, and custom agent workflows for scalable autonomous systems.
- Fine-tuned transformer-based LLMs (e.g., OpenAI models) using structured and unstructured datasets; implemented hyperparameter optimization (Optuna) and efficient training practices (early stopping, class weighting).
- Built intelligent, autonomous knowledge systems using n8n for multi-agent coordination, significantly reducing human intervention in task automation.

Cybersecurity Intern | Opexus Casepoint

September 2024 – November 2024 | Tysons Corner, Virginia

- Designed and implemented scalable log management solutions using Graylog (SIEM), enhancing real-time security monitoring and anomaly detection across enterprise-grade systems.
- Optimized event parsing and alert systems, achieving a 25% increase in incident response efficiency through GROK pattern customization and alert automation.

ML Engineer Intern | Admitscope

July 2023 – September 2023 | Los Angeles, CA

- Led development of a data pipeline and predictive modeling workflow using web-scraped data and feature engineering.
- Trained and deployed logistic regression models, achieving 80% accuracy for a scalable data science analytics platform.

CERTIFICATIONS

- AWS Machine Learning Specialty - November 23, 2024
- Machine Learning Specialization, Stanford University & DeepLearning.AI (Coursera) - August 14, 2023

TECHNICAL SKILLS

Languages: Python, Java, SQL, Dart, HTML

Tools: Git, VS Code, IntelliJ, AWS, Jupyter Notebook, Tableau, Dask, Graylog, Flutter, n8n

Libraries: pandas, NumPy, Matplotlib, scikit-learn, TensorFlow, PyTorch, transformers, LangChain, spaCy, Flask

ACTIVITIES & INTERESTS

Eagle Scout Award | Project RISHI (UCSD) - Financial/Computer Literacy Committee | DS3 (UCSD) | ACM AI - Project Group Member
